LASER WELDING ENCLOSURES

Laser Welding Enclosures from Pro Spot International are flexible, effective solutions for the isolation of laser welding processes. A dedicated, highly controlled environment for laser welding is essential to protect your auto body shop employees from hazardous laser radiation and fumes while ensuring a safe repair process. Customizable models of Laser Welding Enclosures are available to meet the safety, cost, and space requirements of all types of collision repair centers.

KEY FEATURES

- Laser Radiation Containment & Safety
- Safe environment for those outside the curtains, the interior of the curtain enclosureis a Class 4 Laser Controlled Area (LCA)
- Process Stability
- Modular and Scalable Design
- A wide range of mounting and accessory options are available.

Wavelength Rating: The curtains must be specifically rated to block 1070 nm (near-infrared) radiation.

Safety interlock options available. Speak to your representative to build the LCA that is best suited for your needs.
